Trempi Application Developed by: Shulamit Tanger

Trempi lets you create an event and invite your contacts to share a ride with each other. This project developed in Android Studio in environment java. In order to run this App, install the debug-apk on your Android device. The project contains the source code with an apk without the build. To run the app in Android Studio environment you need to create a new build.

 #this app I have provided to a private client after the android course – the client ask for a protype without a server, there is const element like phone number!
